Overall Assessment & What's Working

Honest evaluation of current V1 state

Summary for Chris:

The V1 foundation is solid and shows real intelligence in the architecture. The bilingual capability, the Practice Setup Wizard structure, and the MouthMap 3D viewer are genuinely impressive for a first build. However, the admin dashboard currently reads more like a developer prototype than a product ready for a clinical audience. The UI needs significant polish, and several key features are missing that are essential for the product to be commercially viable.

WHAT'S WORKING WELL

- **Bilingual EN/ES auto-detection** — This is a genuine differentiator. Keep it prominent.
- **Practice Setup Wizard (5-step)** — The concept is right. The execution needs to be deeper (see Section 3).
- **MouthMap 3D viewer** — The Sketchfab embed on the public site is impressive patient-facing technology.
- **PALOMA chat widget** — The floating chatbot concept is correct. The dove branding works.
- **Team directory in setup** — Good idea. Needs expanded fields.
- **Financial upload concept** — The AI-powered financial report analysis is the right direction.
- **Public website** — The main lfamilydentist site is well-designed and content-rich. The services, gallery, and team sections are professional. The word "hero" appears in image alt text on the public site and should be removed — image alt text should describe the content, not the section name.

CRITICAL GAPS AT A GLANCE

- No conversation history storage or retrieval for staff
- No file sharing system (x-rays, STL, CBCT, photos, videos)
- No KPI dashboard with industry benchmarks
- No internal staff messaging
- No PMS integration (acknowledged as future state, but needs to be in roadmap)
- No after-hours email notifications
- No task management or follow-up system tied to conversations
- Admin and Staff portals need full role differentiation — authentication and portal separation is in

progress

2 Critical UI/UX Issues — Must Fix Before Launch

Design and interface problems that will hurt adoption

Emoji-based navigation icons look like a prototype, not a product

CRITICAL

The current sidebar uses emoji (📅 📋 🏥 🇮🇹 💰 👥 🕊️ 🧑🏻 📝 ⚙️) as navigation icons. This immediately signals "developer build" to any clinical or business audience. Dental practice owners and office managers are comparing this to Dentrix, Eaglesoft, or Dental Intelligence — all of which use clean, professional icon sets.

✅ **Fix: Replace all emoji with an SVG icon library (Lucide, Heroicons, or Phosphor). Clean, monochrome icons only.**

Admin must be able to edit the public-facing website directly from the platform

CRITICAL

Currently, there is no way for Admin to edit the content of the public-facing website without developer access. This is a major gap. The admin portal must include a website content editor that allows the practice owner to update: hero text and tagline, service descriptions, team bios and photos, before/after gallery images, testimonials, FAQ content, office hours, and contact information. This does not need to be a full drag-and-drop builder — it should be a clean form-based editor, similar to how Squarespace or Wix handles content blocks. Each editable section of the website should have a corresponding editable field in the admin portal. Changes should publish in real time or with a one-click "Publish" button.

✅ **Fix: Build a "Website Content" section in the admin portal with section-by-section form editors. Add photo/video upload capability per section. Include a preview button before publishing.**

Mobile voice access — Admin and Manager should be able to talk to Paloma via microphone**HIGH**

On mobile devices, Admin and Manager users should have the option to interact with the Paloma internal chat interface using their microphone — voice-to-text input, just like a chatbot on a mobile app. This is not the patient-facing chat. This is the internal admin/manager-facing Paloma assistant (for asking questions like "What were my collections last month?" or "Show me today's schedule"). Accessing a microphone requires explicit user permission via the browser's MediaDevices API, which is straightforward to implement. This significantly improves the mobile experience for practice owners who are moving between rooms and cannot easily type.

✓ **Fix:** Add a microphone icon button to the internal Paloma chat interface on mobile views for Admin and Manager roles only. Use Web Speech API or similar for voice-to-text. Request mic permission on first use with a clear explanation of why it's needed.

Data Editor exposes raw JSON to non-technical users**CRITICAL**

The Practice Data Editor section currently shows raw JSON files with a warning: "Editing these JSON files directly changes what PALOMA knows. Invalid JSON will break the system." This is completely inappropriate for a clinical product. No dentist or office manager should ever see raw JSON. This should be replaced entirely by the Setup Wizard and visual forms.

✓ **Fix:** Remove the JSON editor entirely from the UI. All data editing should happen through visual form-based interfaces. Raw JSON edit is developer-only and should be behind a hidden admin/developer mode.

Dashboard is a collection of sections, not a dashboard**HIGH**

The current "dashboard" is a single long-scrolling page with all sections stacked vertically. A real dashboard shows a snapshot view — KPI cards, recent activity, quick actions — not a full content page for every section. Clicking the sidebar should navigate to focused, purposeful pages, not jump to anchors on a scroll page.

✓ **Fix:** Redesign as a true SPA (Single Page Application) where each sidebar item loads a distinct page/view. Dashboard home = KPI summary cards + recent conversations + today's schedule + alerts.

Treatment Pricing label should be changed to "Fee Schedule"**HIGH**

"Treatment Pricing" is not the clinical term. In dental practice management, this is called a "Fee Schedule." Additionally, staff/managers should not have access to view or modify the fee schedule — this is an admin/owner-only setting. This wording also appears on the public-facing side in one location and should be audited.

✓ **Fix: Rename to "Fee Schedule" throughout. Lock to Admin role only.**

Color scheme and typography lacks hierarchy**MEDIUM**

The admin dashboard uses inconsistent font weights, sizes, and color treatments. Section headers compete visually with content. The overall aesthetic feels like a WordPress admin panel rather than a premium clinical SaaS product. The public-facing website actually looks significantly better — bring that polish into the admin UI.

✓ **Fix: Establish a consistent design system: one primary color (navy), one accent (gold), one alert color (red). Clear type hierarchy: H1 → H2 → body → caption. Minimum 16px body text in forms.**

Mobile responsiveness needs testing**MEDIUM**

The admin dashboard has not been verified on mobile or tablet. Given that staff will often access this from phones during the day, the layout needs to be responsive. The sidebar navigation collapses properly (hamburger menu exists) but several content sections likely break on smaller screens.

✓ **Fix: Full responsive QA on iOS and Android for all three portal views (Admin, Staff, Patient).**

3**Onboarding Wizard — "Introduce Paloma to Your Practice"**

The AI learning experience when a new practice signs up

The current 5-step setup wizard is a good start but needs to be significantly deeper. The goal is for Paloma to fully learn the practice so that from day one, it can answer patient questions accurately

and personally. Here is the complete wizard flow we need:

1 Practice Identity

Practice name, specialty type, location, phone, email, logo upload, office hours. Also ask: Is this a solo practice, group practice, or DSO? FFS, PPO, or mixed? What is your primary patient demographic? What languages does your staff speak?

2 Website & Online Presence — AI Auto-Scan

Ask: "Do you have an existing website?" If yes, enter URL. Paloma should crawl the website automatically and extract: services offered, doctor bios, office info, FAQ content, and testimonials. Admin can review and approve what was extracted. This dramatically reduces setup time and improves accuracy. If no website, prompt to create one via the Paloma website builder.

3 Services & Fees

Full service checklist (current list is good but add: Sedation, Sleep Apnea, Emergency Care, Bone Grafting, Sinus Lift, Zirconia Full Arch). For each service, optionally add: CDT code, fee range (visible only to admin), patient-facing description. Paloma uses this to answer "how much does X cost?" appropriately based on role.

4 Team Directory

For each staff member: name, role/title, photo upload, short bio, languages spoken, specialties. This allows Paloma to say "You can book with our hygienist Emily, who specializes in gentle care." Also set each staff member's portal access level here (Admin, Manager, Staff, Read-Only).

5 Insurance & Financing

Insurance policy details, in-network/out-of-network status, accepted financing partners (CareCredit, Sunbit, in-house). Paloma uses this to answer insurance questions without staff involvement.

6 Paloma Personality & Communication Style

Greeting message, tone selector (Warm & Professional / Clinical & Precise / Casual & Friendly), language settings, default response length, how aggressive to be in follow-up prompts, which topics to escalate to staff vs. answer automatically.

7 Notifications & Alerts Setup

Configure: Which staff receive after-hours conversation summaries (email/SMS)? What triggers an urgent alert? What are the follow-up reminder intervals? What is the escalation path if a patient asks about an emergency?

8 PMS & Integration Setup

Current PMS system (dropdown: Dentrix, Eaglesoft, Oryx, CareStack, Curve, Archy, other). Future: API connection. For now, allow CSV export/import to sync patient lists. QuickBooks connection option. This step can be skipped and done later.

✔ **Key Feature: AI Website Scanner**

When the admin enters their website URL in Step 2, Paloma should crawl it automatically, extract all relevant practice information, and present it back to the admin as a pre-filled review screen: "Here's what I learned about your practice — please confirm or correct." This saves 20+ minutes of manual data entry and makes the onboarding feel magical.

4 **Role-Based Access Control**

What each user type can see, do, and cannot do

This is currently not implemented. All three portals (Admin, Staff, Patient) need completely separate views and permissions. Here is the complete permission matrix:

FEATURE / CAPABILITY	ADMIN / OWNER	MANAGER	STAFF	PATIENT
View all conversations	✔ Yes	✔ Yes	✔ Assigned only	✗ Own only
View financial reports / P&L	✔ Yes	⚠ If granted	✗ No	✗ No
View/edit Fee Schedule	✔ Yes	⚠ If assigned by Admin	✗ No	✗ No
Add / remove staff members	✔ Yes	✗ No	✗ No	✗ No
Change staff permissions	✔ Yes	✗ No	✗ No	✗ No
Upload patient files (xrays, STL, etc.)	✔ Yes	✔ Yes	✔ Yes	⚠ Own files only
View patient files shared with them	✔ Yes	✔ Yes	✔ Assigned	✔ Own only

View KPI dashboard	✓ Full	✓ Full	✗ No	✗ No

5

Patient File Sharing & Imaging

Securely share clinical files with patients through the portal

This is a core V2 feature and one of Paloma's key differentiators. Staff and Admin need to be able to share clinical files directly with individual patients through the portal. Patients should be able to view, download, and (optionally) upload their own files.

FILE TYPES TO SUPPORT

Intraoral X-Rays

Periapical, bitewing, panoramic — JPEG/PNG/DICOM formats. Display inline in browser viewer.

CBCT / 3D Scans

DICOM files. These are large (50–500MB). Needs cloud storage (AWS S3 or similar). Consider viewer integration (3Dicom viewer embed).

STL / PLY Files

Digital scan files for 3D printing and CAD/CAM. Allow download only — browser 3D viewers exist (Three.js STL loader) for inline preview.

Clinical Photos

Before/after photos, intraoral photography. JPEG/PNG. Must be displayed in a secure patient-only viewer, never publicly accessible via URL.

Patient Education Videos

MP4 or embedded links (YouTube/Vimeo private links). Practice can share specific education videos with specific patients as part of treatment plans.

Treatment Plans & Reports

PDF documents — signed treatment plans, consent forms, clinical notes, referral letters. Must be watermarked with patient name and date when downloaded.

DENTAL CHART — TOOTH NUMBERING DISPLAY

Important Design Note:

The current system uses generic squares or placeholder elements for dental chart display. This must be replaced with a proper dental arch diagram showing all 32 teeth with Universal Numbering System (teeth #1–#32) displayed in an open-mouth anatomical view. Each tooth should be clickable to attach notes, files, or treatment flags. This is standard in all dental software and patients expect to see it. Do NOT use squares — use actual tooth icons in an arch layout. Reference: ADA Universal Numbering System.

HIPAA COMPLIANCE REQUIREMENTS FOR FILE STORAGE

- All files must be stored in a HIPAA-compliant cloud environment (AWS S3 with Business Associate Agreement)
- Files must be encrypted at rest (AES-256) and in transit (TLS 1.2+)

- Access must be logged — who accessed what file and when
 - Files must never be accessible via a public URL — only authenticated, authorized users
 - Signed URLs with expiration (15–60 minutes) for any direct file access
 - Each practice signs a BAA with Paloma before files can be uploaded
-

6

Conversation Management & Notifications

How staff access, review, and act on patient conversations

This is currently missing entirely. Every PALOMA patient conversation needs to be stored, summarized, and actionable for staff. Here is the full feature set needed:

CONVERSATION STORAGE

- Every conversation is saved in full — all patient messages + all PALOMA responses, with timestamps
- Conversations are searchable by patient name, date, keyword, or topic category
- Conversations are tagged automatically by topic (Scheduling, Insurance, Treatment Question, Complaint, Emergency, etc.)
- Staff can view the complete transcript in a clean, chat-style interface

AI CONVERSATION SUMMARY

- After each conversation ends (patient closes chat or 30 minutes of inactivity), Paloma auto-generates a plain-English summary: "Patient asked about implant pricing, expressed concern about cost, requested a consultation. PALOMA provided general pricing range and offered to schedule. Patient did not book."
- Summary is visible to all staff and admin from the conversation log
- Summary includes: Patient name, date/time, topics covered, any action items, sentiment score (positive / neutral / concerned), next recommended action

AFTER-HOURS NOTIFICATIONS

- When a patient chats outside of office hours, the system sends an email summary to configured staff recipients
- Email includes: Patient name, timestamp, full summary, link to full transcript

- Configurable: Which staff receive after-hours alerts? (Admin sets this in notification preferences)
- Optional SMS alert for urgent keywords (pain, emergency, swelling, etc.)

TASK & FOLLOW-UP SYSTEM

- Any conversation can be flagged as "Needs Follow-Up" by staff
- When flagged, it creates a task with: Patient name, task description, assigned staff member, due date
- Tasks appear in the staff dashboard as a prioritized action list
- When a task is completed, staff marks it done — logged with: timestamp, staff name, completion notes
- Admin can see full task audit trail (who completed what and when)
- Overdue tasks trigger a reminder notification to assigned staff and admin

REMINDER SYSTEM

- Admin and staff can set manual reminders on any patient: "Follow up about implant consult in 2 weeks"
- Paloma can also auto-set reminders based on conversation content: "Patient said they need to think about it" → auto-reminder in 5 days
- Reminders delivered via in-app notification + email

7

Analytics & KPI Dashboard

Practice performance metrics — evidence-based benchmarks from peer-reviewed sources

Reference Standard:

Industry benchmarks in Paloma should be sourced from peer-reviewed dental economics literature — primarily the *Journal of Dental Economics*, ADA Health Policy Institute annual surveys, and published reports from Dental Group Practice Association (DGPA). This positions Paloma as evidence-based rather than relying on vendor-specific or anecdotal benchmarks. Paloma's credibility with practice owners depends on the data being defensible and citable.

REQUIRED KPI CATEGORIES

Production & Collections

Scheduling & Capacity

Monthly production, collections, collection rate %, production per patient, production per day, production per hour (by provider). Compare vs. prior period and industry benchmark.

Schedule fill rate %, unscheduled treatment value (\$), cancellation rate %, no-show rate %, same-day openings. Ideal day production vs. actual.

New Patient Metrics

New patients per month, new patient source (referral, web, Paloma, etc.), new patient conversion rate, first appointment completion rate.

Case Acceptance

Treatment plan acceptance rate %, unaccepted treatment value (\$), average days to case acceptance, acceptance rate by procedure type, acceptance rate pre/post Paloma engagement.

Recall & Retention

Active patient count, recall compliance %, reactivation rate (patients lost > 18 months), patient retention rate, hygiene reappointment rate.

Chair Utilization

Chair hours used vs. available hours per operatory, revenue per chair per day, idle chair time %, peak vs. off-peak utilization. Broken out by provider where applicable. This metric directly identifies capacity waste and revenue leakage — critical for practices evaluating whether to add an associate or expand hours.

Overhead & Expense Ratios

Payroll % of collections, lab % of collections, facility % of collections, supplies % of collections, total overhead %. Each displayed against benchmark and practice-set target.

Paloma-Specific

Conversations per month, conversations by language, topics breakdown, after-hours conversation volume, patient satisfaction score from chat, appointments booked via Paloma, cases closed after Paloma engagement.

INDUSTRY BENCHMARK — PRACTICE TYPE DROPDOWN

Important:

A general dentistry benchmark and a prosthodontic or specialty practice benchmark are substantially different numbers. A one-size benchmark misleads practice owners. Admin must be able to select their practice type from a dropdown, and all benchmark values adjust accordingly.

The benchmark dropdown should include at minimum:

- General Dentistry — Solo Practice
- General Dentistry — Group Practice (2–5 providers)
- Prosthodontics — Private FFS
- Oral Surgery
- Orthodontics
- Periodontics
- Pediatric Dentistry
- Endodontics
- Multi-Specialty Practice

Benchmark values for each specialty should be sourced from: **ADA Health Policy Institute** (annual economic surveys), **Journal of Dental Economics**, **MGMA Dental Benchmarks**, and **Dental Group Practice Association** published data. Each benchmark displayed in Paloma should show its source citation so practice owners can verify.

DATE RANGE FILTERS (REQUIRED)

Admin must be able to filter all reports by:

- Today / Yesterday
- This Week / Last Week
- This Month / Last Month
- This Quarter / Last Quarter
- This Year / Last Year
- Custom Date Range (date picker)
- Annual, Monthly, Quarterly, Weekly view modes

BENCHMARK ALERT SYSTEM

- Each KPI displays three numbers side by side: Actual | Industry Benchmark | Your Practice Goal
- Admin can set a custom "Practice Goal" for each KPI — this is their target, independent of the industry average
- If Actual falls below Industry Benchmark: red flag alert
- If Actual falls below Practice Goal: orange alert

- If Actual meets or exceeds Practice Goal: green indicator
- Admin and Manager can configure custom alert rules: "Alert me if monthly collections drop below \$X" or "Alert me if case acceptance falls below Y%"
- Alerts delivered via in-app notification + email digest (daily or immediate, configurable)

PALOMA AS INTERNAL ANALYTICS ASSISTANT

✅ Feature: Ask Paloma About Your KPIs

Admin and Manager should be able to ask Paloma questions about their own analytics in natural language — via text or voice on mobile. Examples: "What was my collection rate last quarter?" / "Which provider had the highest production per hour this month?" / "Am I above or below benchmark on case acceptance?" Paloma answers using live dashboard data and provides a plain-English explanation of what the numbers mean and what to do about them.

Additionally, Paloma should be able to **suggest relevant literature or sources** when practice owners ask clinical or operational questions. For example, if an admin asks "What's a good case acceptance rate for implants?", Paloma should not only give the benchmark number but offer to cite the source: "Based on ADA HPI 2023 survey data, implant case acceptance averages 62% for general dentists and 78% for specialists. Would you like me to pull the reference for this?" This positions Paloma as an intelligent, evidence-aware advisor rather than a simple data display tool.

EXPORT

- All reports exportable as PDF (formatted, branded with practice logo) or CSV (raw data)
- PDF reports include practice name, date range, generated timestamp, and benchmark source citations

8

Financial Intelligence & QuickBooks Integration

Practice financial tracking, forecasting, and accounting integration

QUICKBOOKS CONNECTOR (PHASE 1 — MANUAL UPLOAD)

The current financial upload concept (drag-and-drop CSV/PDF/XLSX) is the right starting point. Paloma AI analyzes the uploaded file and returns a structured breakdown. This is Phase 1. Here is

what the analysis output should include:

- Revenue vs. Expenses summary with monthly trend
- Expense breakdown by category vs. dental industry benchmarks (payroll target: 25–28%, lab target: 8–12%, facility target: 5–8%, supplies target: 5–7%)
- Net profit margin vs. benchmark (target: 30–40% for FFS prosthodontics)
- Red flags: Any expense category exceeding benchmark triggers an alert with explanation
- Cash flow trend: Collections vs. production (collection rate)
- AI narrative summary: Plain-English paragraph summarizing the financial picture and top 2–3 concerns

QUICKBOOKS DIRECT INTEGRATION (PHASE 2)

- OAuth connection to QuickBooks Online via official Intuit API
- Auto-pull of P&L, A/R Aging, A/P Aging, Balance Sheet on configurable schedule (daily, weekly)
- Admin can grant or revoke QuickBooks access — this permission is Admin-only, never visible to staff
- All QuickBooks data is read-only — Paloma never writes to QuickBooks
- Financial forecasting: Based on historical QuickBooks data + current schedule fill rate, project next 30/60/90-day revenue

FINANCIAL REPORT DATE RANGES

Admin needs all of the same date range options as the KPI dashboard: daily, weekly, monthly, quarterly, annual, last period, and custom. Financial forecasts should show: current month projected, next month projected, and 90-day outlook.

9

Website Builder & Embedding Options

How practices use Paloma on their existing or new websites

There are two types of practices: those who already have a website and those who don't. Paloma needs to serve both.

OPTION A — PRACTICES WITH EXISTING WEBSITES (EMBED)

Provide a simple HTML snippet they paste into their existing website (Wix, Squarespace,

WordPress, etc.). The snippet adds:

- The Paloma chat widget (floating button, opens chat panel)
- A patient portal login button that links to their Paloma patient portal
- Admin generates this snippet from the Settings page with one click — no coding required

Embed Code Example (what admin copies):

```
<script src="https://paloma.health/embed.js" data-practice-id="YOUR_ID"></script>
```

That's it. One line. The script loads the chat widget and portal login automatically.

OPTION B — PRACTICES WITHOUT WEBSITES (PALOMA WEBSITE BUILDER)

Paloma offers a built-in website builder for practices that don't have a site. This is NOT a full Wix/Webflow replacement — it is a templated, dental-specific site builder. Features:

- Pre-built dental templates (3–5 options) with practice branding applied automatically
- Admin can edit: hero text, about section, services, team photos, testimonials, contact info
- Photo/video upload and management (drag and drop)
- The Paloma chat widget is automatically embedded
- Published to a subdomain: practicename.paloma.health (or custom domain via CNAME)
- Not a full page-builder — think of it as a sophisticated template editor, not Wix

AI WEBSITE CLONING — IMPORTANT CLARIFICATION

⚠️ Chris — Note on "website cloning":

True website cloning (copying another site's design and content) has legal and technical risks. What Paloma should do instead is: (1) scan the practice's existing website URL during onboarding to extract text content and populate Paloma's knowledge base, and (2) offer to rebuild a clean version using that content in a Paloma template. Do NOT copy CSS, images, or design — only extract text content. This is safe legally and technically.

10

Dental Intelligence Feature Set — Complete List

All analytics capabilities modeled on industry-standard dental software

The following is the complete analytics feature set that Paloma should work toward, modeled on Dental Intelligence (DI), the leading dental analytics platform. This is the full roadmap — not all features need to be in V1, but all should be planned for.

FEATURE	PRIORITY 1	PRIORITY 2	PRIORITY 3
Production & Collections KPIs	✓ Manual upload	✓ QuickBooks sync	✓ PMS sync
Case Acceptance Rate tracking	⚠ Manual input	✓ PMS integration	✓ AI prediction
New Patient Source Tracking	⚠ Basic	✓ Full attribution	✓ Full
Recall & Reactivation	✗	✓ Via Paloma chat	✓ Automated
Unscheduled Treatment Value (\$)	✗	⚠ Partial	✓ Full
Schedule Fill Rate & Gaps	✗	⚠ Manual	✓ PMS sync
Provider Production Breakdown	✗	⚠ Basic	✓ Full
Overhead % by Category	✓ QuickBooks upload	✓ Auto-sync	✓ Full
Industry Benchmarks Built-in	✓ Launch	✓ Launch	✓ Launch
Custom Practice Goal Setting	✓ Launch	✓ Launch	✓ Launch
Financial Forecasting (30/60/90 day)	✗	✓ AI model	✓ Full
Patient Lifetime Value	✗	✗	✓ V3

Morning Huddle Report (daily)	✗	✓ Auto-email	✓ Full
PDF/CSV Export	✓ Launch	✓ Launch	✓ Launch
Paloma-specific engagement metrics	✓ Launch	✓ Launch	✓ Launch

11

Internal Staff Messaging

Secure in-app communication between team members

Staff need to communicate with each other about patients and tasks without leaving the Paloma platform. This is especially important for tying internal communication to specific patient conversations.

REQUIRED FEATURES

- Direct messages between any two staff members
- Group channels (e.g., #clinical-team, #front-desk, #all-staff)
- Ability to link a message to a specific patient conversation: "@Emily — patient Maria Gomez just asked about implant pricing, she seems close to booking"
- Messages are searchable and retained for audit purposes
- Notifications: in-app badge + optional email for messages received while offline
- Admin can view all internal messages (compliance requirement)
- Message timestamps and sender attribution always visible

 Note:

Do not allow patients to see internal staff messages under any circumstances. The internal messaging system must be completely separate from the patient-facing chat interface. These are two completely different systems sharing the same platform.

12

Brand & Copy Issues Found on Current Site

Specific text and wording corrections needed immediately

LOCATION	CURRENT TEXT	REQUIRED CHANGE	PRIORITY
Public website — image alt text throughout	Alt text references "hero" (e.g., "paloma-hero.png" used as visible label)	Remove the word "hero" from all user-facing image alt text and filenames referenced in visible UI. Descriptive alt text only (e.g., "PALOMA AI dental assistant")	MEDIUM
Practice Settings sidebar	"Treatment Pricing"	Change to "Fee Schedule"	HIGH
All navigation icons	Emoji icons (📅💰)	Replace with professional SVG icon library	CRITICAL
Data Editor section	Raw JSON editor visible to all users	Remove entirely from UI — developer mode only	CRITICAL
Admin portal — website content	No way to edit public website content without developer access	Build form-based website content editor in admin portal — editable sections, photo/video upload, one-click publish	CRITICAL
Main website — animated stats	Animated counters showing 0 (not loading correctly)	Verify counter animation works on all browsers and devices	MEDIUM
Community section	Think! Cooperative partners visible on dental practice website	Consider moving Think! Cooperative content off the dental practice site — it dilutes the clinical brand focus	MEDIUM
PALOMA	Listed as "Patient"	Confirm consistent use: "Patient Advocacy"	MEDIUM

acronym expansion	Advocacy & Lifecycle Oral Map Assistant" on public site	and Lifestyle Oral Map Assistant" — verify "Lifecycle" vs "Lifestyle" spelling is consistent everywhere
-------------------	---	---

13

Prioritized Build Roadmap

What to build in what order — organized by priority, not timeline

PRIORITY 1 — BEFORE ANY BETA PRACTICE GOES LIVE

- Real authentication system — separate Admin, Staff, and Patient portals with role-based views
- Remove raw JSON editor from UI entirely
- Replace all emoji navigation icons with professional SVG icons
- Rename "Treatment Pricing" to "Fee Schedule"
- Remove "hero" from all user-facing image alt text
- HIPAA-compliant file storage infrastructure (AWS S3 + BAA)
- Complete onboarding wizard with website URL scanner (AI auto-fill)
- Admin website content editor — form-based, section-by-section, with photo/video upload and publish button
- Mobile microphone access for Admin and Manager internal Paloma chat

PRIORITY 2 — CORE FEATURE SET

- Conversation storage, retrieval, and search for staff
- AI conversation summary after each patient chat session
- After-hours email notification to admin when patient chats
- Task and follow-up system tied to conversations with timestamp and completion tracking
- KPI dashboard — Production, Collections, New Patients, Case Acceptance, Chair Utilization, Recall
- Industry benchmarks pre-loaded by specialty type (dropdown: General, Prosthodontics, Oral Surgery, etc.)
- Benchmark sources from ADA HPI, Journal of Dental Economics, DGPA

- Custom practice goal setting per KPI
- Paloma internal analytics assistant — natural language Q&A with literature citation capability
- Dental tooth chart with Universal Numbering System (#1–#32) in open-mouth arch view
- Basic file sharing (photos, PDFs, x-rays) with patients
- Internal staff messaging
- PDF/CSV export for all reports
- Embed snippet for practices with existing websites (one-line HTML)
- Manager fee schedule access — if assigned by Admin

PRIORITY 3 — ADVANCED FEATURES

- QuickBooks OAuth direct integration (read-only)
- STL/PLY/CBCT file support with browser-based viewer
- Financial forecasting (30/60/90 day projection)
- Automated recall and reactivation via Paloma patient chat
- Morning Huddle auto-report (daily email to admin with overnight summary)
- Paloma website builder for practices without existing sites (templated, dental-specific)
- Patient-initiated file upload (own scans, photos)
- Longitudinal scan comparison — side-by-side patient health tracking over time
- PMS integration (Oryx API first, then CareStack)
- Patient risk assessment scoring

PRIORITY 4 — MEDICAL EXPANSION

- Platform adaptation for medical practice verticals (primary care, dermatology, orthopedics, plastic surgery)
- Patient lifetime value tracking
- Advanced AI treatment outcome prediction
- Multi-practice / DPO aggregate dashboard (aggregate analytics across multiple locations)
- FHIR/HL7 data exchange standard compliance for medical EHR integration
- White-label option for DSOs and group practices
